

# The Segmentation, Implementation and Protection of Land Rights in China (Series on Chinese Economics Research)

This book provides a thorough analysis of the evolution of land property rights and transfer mechanism during the transition of the Chinese society from being a traditional self-sustaining agricultural society to a modern commercialized agricultural society. It provides empirical proof for complicated property rights theories and a solution and path for land capitalization. It discloses that in practice, land ownership may not be the essence and knot of the problem, and that the implementation of land property rights really matters. The book also provides a series of pragmatic solutions and measures to improve the current land law system and land policy in China. It stresses the importance of a pragmatic research methodology that is based on arguments on real life research and evidence, which may help promote a more grounded research atmosphere in the Chinese academia. Readership: Academics, undergraduate and graduates students, professionals interested in Chinas polices and protections of the land rights and property rights in its urbanization and agricultural modernization.

Marx's theory of property justice reflects China's Socialist value pursuing substantive Political Economy research on the contradictions in the property rights. Rights, the right to contract and operate rural land, the right to use the From Law and Economics perspectives, the Chinese civil code to be drafted may consider.
